

# Cluster Progress

February 11, 2019

## Node Installation Challenges (cont.)

- We have attempted several different methods.
  - tried installing CERN CentOS's "compute node" package
    - looked like old nodes; no kickstart file requested
  - tried pointing Anaconda installer at the address provided by `insert-ethers`
    - fails to find anything
- We've submitted a lengthy forum post to Hypernews in hopes someone will be able to help us.

## ? Trouble getting compute nodes to request kickstart file on new ROCKS cluster.
