Installing ROCKS on the Nodes!

- Daniel came in Wednesday and helped us figure out the issue with the nodes.
- We set the nodes to network boot (PXE) in the BIOS, so they would request the kickstart file upon restart.
- We ran insert-ethers and the nodes requested the kickstart files successfully!

A terminal window screenshot showing the successful installation of ROCKS 7. The text is displayed in green on a dark background. It shows the node name, version, profile build time, kickstart time, and the root prompt.

```
Rocks Compute Node  
Rocks 7.0 (Manzanita)  
Profile built 12:03 25-Feb-2019  
  
Kickstarted 12:53 25-Feb-2019  
[root@compute-1-0 ~]#
```

Figure: The installation of ROCKS 7 onto the node was successful!
